

Warm-up 4/25

1. $y = 5200(3^x)$ is the model of growth per day of mold spores for a type of mold. A loaf of bread can hold a maximum of 456,800,000,000 mold spores.

- **What things do you know about the mold spores and its growth from the equation?**
- **How long will it take to completely take over the loaf of bread?**

2. A tour boat leaves the dock and travels to an awesome amusement park at 8 miles per hour for x hours. The return trip to the dock takes y hours at 12 miles per hour. The boat ride takes a total of 5 hours.

How long was the trip from the dock to the amusement park?

How far is the dock from the wildlife park?

Warm-up 4/25

1. $y = 5200(3^x)$ is the model of growth per day of mold spores for a type of mold. A loaf of bread can hold a maximum of 456,800,000,000 mold spores.

- What things do you know about the mold spores and its growth from the equation?

It is growing by x3 (or tripling).
The bread starts with 5200 mold spores.

- How long will it take to completely take over the loaf of bread?

~~$5200(3^{25}) = 4.406E15$~~ (way over)
 $4,406,000,000,000,000$ (17 days)

$5200(3^{17}) = 6.715E11$
 $671,500,000,000$ ✓ (just over)

~~$5200(3^{16}) = 2.238E11$~~
 $223,800,000,000$ X (below)

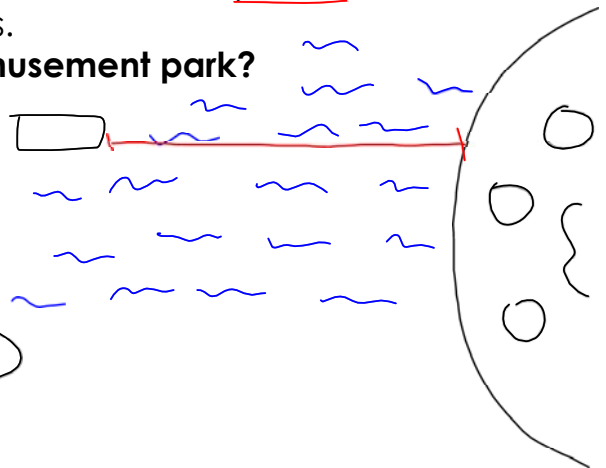

2. A tour boat leaves the dock and travels to an awesome amusement park at 8 miles per hour for x hours. The return trip to the dock takes y hours at 12 miles per hour. The boat ride takes a total of 5 hours.

How long was the trip from the dock to the amusement park?

$$\begin{aligned} 8x &= 12y \\ y &= \frac{2}{3}x \\ 5 &= x + y \end{aligned}$$

$$\begin{aligned} x + y &= 5 \\ -x & \quad -x \\ \hline y &= 5 - x \end{aligned}$$

$$\begin{aligned} 8x &= 12(5 - x) \\ 8x &= 60 - 12x \\ +12x & \quad +12x \\ \hline 20x &= 60 \\ \frac{20x}{20} &= \frac{60}{20} \quad x = 3 \end{aligned}$$

3 hours

How far is the dock from the wildlife park?

$8(3) = 24$
 $12(2) = 24$

24 miles

Warm-up 4/25

1. $y = 5200(3^x)$ is the model of growth per day of mold spores for a type of mold. A loaf of bread can hold a maximum of 456,800,000,000 mold spores.

- What things do you know about the mold spores and its growth from the equation?

Each day the mold triples (grows exponentially)
It starts with 5200 mold spores.

- How long will it take to completely take over the loaf of bread?

$x = 10 \rightarrow 5200(3^{10}) = 11,372,400$ $x = 15 \rightarrow 5200(3^{15}) = 2,015,000,000,000$
 $x = 20 \rightarrow 5200(3^{20}) = 1,071,000,000,000,000$
 $x = 25 \rightarrow 5200(3^{25}) = 1,813,000,000,000,000$
17 days
 $x = 17 \rightarrow 5200(3^{17}) = 6,715,000,000,000$ ✓
 $x = 14 \rightarrow 5200(3^{14}) = 2,238,000,000,000$

2. A tour boat leaves the dock and travels to an awesome amusement park at 8 miles per hour for x hours. The return trip to the dock takes y hours at 12 miles per hour. The boat ride takes a total of 5 hours.

How long was the trip from the dock to the amusement park?

$$\frac{8x}{12} = \frac{12y}{12}$$

$$y = \frac{2}{3}x$$

$$x + y = 5$$

$$-x \quad -x$$

$$y = -x + 5$$

$$8x = 12(-x + 5)$$

$$8x = -12x + 60$$

$$+12x \quad +12x$$

$$\frac{20x}{20} = \frac{60}{20} \quad (x = 3)$$

How far is the dock from the wildlife park?

$8(3) = 24 \text{ miles}$

c. $f(x) = -2.5(x - 3)(x - 3)$

$$\begin{array}{r} x - 3 = 0 \\ + 3 \quad + 3 \\ \hline x = 3 \end{array}$$

e. $f(x) = 2(x - 1)(x - 5)$

a. $f(x) = 2(x + 1)(x + 5)$
